determining [providing] by said bridge server, in response to said received

request, additional content [to the client system], in addition to the requested content to be

provided to the client system by the network server; and

provided by said bridge server said determined additional content or an identifier of

said additional content to said client system.

4. (Twice Amended) The method of claim 1, [further comprising] wherein said determining

comprises checking by said bridge server whether additional content corresponding to said

network server exists.

10. (deleted)

11. (Twice Amended) The method of claim [10] 1, wherein the identifier of the additional

content comprises a Uniform Resource Locator (URL) corresponding to the additional

content.

17. (Thrice Amended) The method of claim 1, wherein said providing comprises returning by

said bridge server a HyperText Markup Language (HTML) page to the client system, wherein the

HTML page includes [an] said identifier of the additional content for the client system to retrieve

the additional content.

19. (Thrice Amended) A bridge server comprising:

control logic operative to receive a request for content from a client system targeting

a network server, and to check, in response to said received request, whether additional

content is to be provided to the client system, in addition to the requested content to be

provided to the client system by the network server; and
